Longitude | Mac acceptance

Milestone 5B - physical-hardware review checklist

NOT EXECUTED. All outcomes are blank. CI compilation, browser tests and DMG creation do not complete native Mac acceptance.

Test record

Tester / date: _____

Device / model / CPU architecture / RAM: _____

macOS build / system WKWebView or Safari-WebKit version: _____

Displays / scales / toolchain: _____

Source revision / executable SHA-256: _____

App path / actual signature and notarization status: _____

Test Apple Silicon and Intel separately. macOS 12.0 is a declared minimum, not verified compatibility. Back up user data; use isolated debug configuration for corruption/recovery checks. Attach screenshots, exact results and reproducible defects.

01 Native title bar

Real traffic lights, 80-point safe inset, double-click, drag, minimize, Zoom/fullscreen, restore; no duplicated HTML lights, resize at minimum size

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

02 Application menus

About, Settings, Services, Hide/Hide Others/Show All, Edit cut/copy/paste/undo/redo/select-all, Window, Cmd+W, Cmd+Q; focused text inputs/IME

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

03 Status item

Template icon in light/dark/highlight/high contrast; primary click opens menu without toggling twice; groups, Now, Open, widget, Settings, Quit; no duplicate action dispatch

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

04 Lifecycle

Close=Hide with/without status item, close=Quit, widget close, all windows hidden, Dock reopen and second launch, Cmd+H/unhide, OS Quit, interrupted/failed flush pauses Quit, actual logoff

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

Interaction and data integrity

Run against the actual native app on the recorded Mac.

05 Shortcut

Fresh profile Option+Command+T; saved/imported shortcut unchanged; unrelated system shortcuts untouched; occupied/invalid/new bindings, permission failure, old binding rollback, cleanup on Quit

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

06 Floating widget

Pinned/unpinned property after show/reload/restart, opacity 60-100%, hide/show/expand/focus, multiple Spaces, fullscreen app/Stage Manager restrictions

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

07 Persistence

Actual Tauri app-config path, rapid writes, two-window changes, restart, CAS/locking, prepared-file interruption, recovery/backup, malformed/future schema, stale or lost responses

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

08 Appearance/display

System dark/light live changes, explicit theme override, Retina text/icons, 100/200% and mixed scaling, negative/removed monitors, safe work area, fullscreen bounds not saved as ordinary placement

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

09 Clock/domain

Same DST/fractional-offset fixtures, local midnight, manual selection immune to live updates, 1/5-minute snapping, direct entry/AM/PM/keyboard, drag captured outside dial and window

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

10 Sign-in

Opt-in LaunchAgent on/off, user denial/settings change, restart/logoff/login, app relocation; restore original preference after testing

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

11 Offline/privacy

Built app with networking disabled, no loopback dev server, no accounts/telemetry; only implemented file/shortcut/login services

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

Packaging and final record

12 Distribution

Actual per-architecture .app/DMG, signature/hardened-runtime/entitlements, notarization/stapling/Gatekeeper, clean install/update/uninstall

Result: [ ] Pass [ ] Fail [ ] Blocked Evidence / notes: _____

Performance - each architecture / device

Use a 60-second warmup. Keep builds and other test suites stopped during resource measurements. Record method, interval, process set and raw evidence; frame proxies are not input-to-photon latency.

- ☐ Live CPU <=1% total machine. Actual: _____% Interval: _____ Evidence: _____
- ☐ Planning CPU <=0.25%. Actual: _____% Interval: _____ Evidence: _____
- ☐ Sampled aggregate private memory <=250 MiB. Actual peak: _____ MiB
- ☐ Ten-minute growth: _____ MiB; separate visible-widget increment: _____ MiB
- ☐ Drag/frame responsiveness / Long Tasks: _____
- ☐ Cold / warm startup, method and raw evidence: _____

Existing Windows CPU-budget failures remain open. No Mac performance result can be inferred from Windows. Playwright WebKit is separate from the native system WKWebView.

Defect and review record

Case / trigger: _____

Expected / actual behavior: _____

Evidence / reproduction / remediation: _____

Open defects and accepted limitations: _____

Reviewer / date / decision: _____

- ☐ Actual Mac hardware evidence is attached; unverified items remain identified.
- ☐ Signing, notarization, stapling, Gatekeeper and install results are recorded separately.
- ☐ Milestone 5B runtime approval is explicitly recorded before Milestone 6 begins.

Distribution note: the transparent Mac widget enables Tauri private APIs and excludes Mac App Store submission. Developer ID distribution still requires verified signing and notarization. Do not bypass system security to manufacture a pass.
